

EXPERIMENT NO: 02 – PROBLEM STATEMENT

AIM:

The aim of this experiment is to study the challenges faced by students in staying updated about campus events and activities, and to design a user-centric system that improves awareness, registration, and participation through digital solutions such as QR-based access.

PROBLEM STATEMENT:

In a college environment, information about events, workshops, seminars, club activities, and other campus programs is shared through multiple disconnected channels such as messaging apps, emails, and notice boards.

While events are frequently organized, students often miss them due to lack of timely updates, unclear communication, or difficulty in tracking registrations. Additionally, the existing registration process is often manual or scattered across different platforms, making it inefficient and hard to manage.

There is also no standardized system to verify participation or streamline entry during events, leading to delays and confusion.

This problem highlights the need for a centralized platform that not only provides real-time updates about all campus activities but also simplifies the registration process. Integrating QR code generation for each registered student can enable quick verification, improve event management, and enhance overall efficiency.

By addressing these issues, the system can ensure better communication, seamless registration, and increased student participation in campus activities.

OBJECTIVES:

- To identify challenges in staying updated with campus events and activities
- To analyze current methods of event communication and registration
- To design a centralized platform for event updates and registrations
- To implement QR code-based registration for easy access and verification
- To improve awareness, participation, and event management efficiency

PROPOSED SOLUTION:

- Develop a centralized mobile/web application for all campus events
- Provide real-time updates and notifications for upcoming activities
- Categorize events (technical, cultural, workshops, seminars, etc.)
- Enable easy online registration for events
- Generate a unique QR code for each registered participant
- Allow QR scanning during events for quick entry and attendance tracking
- Design a clean, user-friendly interface for better usability.

OUTCOME:

USER STORY 9

9 As a club organizer, I want to create events and send them for faculty approval so that only valid events are published.

Updated by Sanshia Jude: Yesterday

Description

- Event Creation:
 - Club members can create events by entering details such as title, date, time, venue, and description.
 - Events are initially saved in draft mode.
- Approval Workflow:
 - Events can be submitted to faculty for approval.
 - Faculty can review submitted events.

Acceptance Criteria

1. The system should allow club members to create an event with all required details.
2. The system should allow submission of events for faculty approval.
3. Faculty should be able to approve or reject events.
4. Approved events should be visible to students.
5. Rejected events should not be visible to students.
6. The system should notify clubs about approval or rejection.

+ New Sprint

RESULT:

The study identifies the need for a centralized platform that provides timely updates on campus events and activities while simplifying the registration process. By integrating features such as categorized event listings, real-time notifications, and QR code-based registration, the system ensures better organization and accessibility of information.
